The Aclara STAR® Network Electric Meter Transmission Unit (MTU)

The STAR Network electric MTU provides the detailed usage profile needed to support modern customer services, advanced billing plans, and electric supplier choice programs.

A backup battery ensures continual operation and receipt of critical data during outages. It transmits up to 288 meter readings per day, maintains clock accuracy, and performs on-demand reads, providing consistent and long-term performance.

Specifications

- Gas Solutions
- Electric MTU
- Water Solutions
- NCC Network Control Computer
- DCU II
- ZoneScan Leak Detection

Each STAR Network MTU delivers

Historic data storage	Stores up to 30 days of data for retrieval
Firmware upgrades over network	Uploads new functionality to uninstalled meters
C12.19 tables support	Supports ANSI/IC standard for meter data interchange
Outage and restoration management	Provides messaging to support comprehensive outage management
Supports modern tariffs	Provides accurate interval metering and supports time of use, real-time pricing, and critical peak pricing
Additional data	Reports account information, meter reading, battery condition, peak demand, tamper status, and outage information
